

FORC

Lagranja

With the aim of suiting people's lives in both contemporary spaces and also more stylish zones in special or classic locations, this design by the Lagranja studio provides a practical, convenient wood coat stand. The arrangement of the wooden pegs, with their smooth shapes, means they can be used to hang all kinds of garments and accessories at differing heights.

Lagranja has also thought of children, who can hang their clothes on the metal structure that joins the wooden pegs, designed for bags, helmets and umbrellas. This is a stable, hard-wearing stand perfect for offices, restaurants and bars.

Lagranja

2002 - Barcelona

Lagranja Design is a design studio set up in 2002 in the city of Barcelona by Gerard Sanmartí and Gabriele Schiavon.

They design products and interior architecture with an international scope. Their work can be recognised by its clarity of form; a life story hides behind every product and its design is always friendly and closely related to people. Many of their projects develop from them working on a specific idea related directly or indirectly to the product, very often surprising us with the resulting ingenious solution.

Over the years Lagranja has gathered together a team of professionals from a wide range of disciplines such as product, graphic and interior design but with a common identity that runs through all the different projects they've carried out for leading design firms, including Foscarini, Poltrona Frau and Santa & Cole.

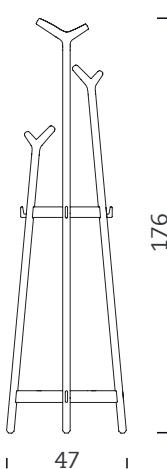

General description

Freestanding coat stand made from 3 pieces of solid beech of differing sizes, thereby optimising the capacity of the coat stand and making it more convenient for users.

Two metal crosspieces support the structure (or hanger). The higher crosspiece, which also has hooks at the end, is located at an easy, practical height for children to hang their accessories. The lower crosspiece has a base where bags can be placed.

Total capacity of 9 pegs and a supporting base.

Measurements

Coat hanger

Made up of three turned poles, 32 mm in diameter, set at differing heights. Finished with a CNC machine-tooled piece in the form of a "v", overall measurements 225 x 125 mm. This element serves as a peg and its rounded, smooth shape minimises any distortion in garments when they are hung on the stand.

All these elements are made from solid natural beech finished with water-based varnish.

Metal frame

Lower base made of 3 steel strips 5mm thick and a steel plate disk, 250mm in diameter, made from 8mm-thick sheet steel.

The upper base is also made of 3 steel strips 5mm thick.

All the elements are TIG welded.

The metal pieces have been finished in a textured epoxy powder coating, 80 microns thick, 30% matte, colour RAL 9002 or RAL 7022.

These pieces are joined to the wooden pegs using injected pieces in white or grey polyamide and a stainless steel M5X12 Allen bolt.

Packaging

The coat stand is supplied dismantled, delivered in 2 boxes.

Hanger

Weight: 4.2 kg

Size: 215 x 49 x 40 cm

Metal frame

Weight: 6.5 kg

Size: 55 x 55 x 11 cm
