Materials and finishes

Base

Base with 350mm diameter made of steel plate, 6mm thick. Five locations to place ferrules made of polyamide, dark grey colour, are placed on the inner side and separated 8mm from the pavement.

Structure

Central structure made of aluminium tube, 30x2mm diameter.

A mechanized piece is placed at the bottom part enabling to screw the tube to the base. The same piece is also placed in the umbrella stand - hanger model in order to join the two tubes.

The top part is covered with a plastic cap finished with the same colour of the ferrule, dark grey.

Coat racks

They are made of polyamide injection piece with fibreglass.

Thanks to its shape and inclination, different types of clothes, accessories and hangers can be hanged on it.

They are fixed to the central tube by means of a screw placed on the side part.

Umbrella stand - hanger

This version has a rounded piece 450mm above the pavement enabling to place umbrellas. It is made of steel plate, 3mm thick, laser cut.

A concave piece at the base, made of ABS and finished with the same RAL colour of the other components, allows collecting the water dripping from the umbrellas.

Wall hangers

They are made of an injected piece by acrylonitrile styrene (SAN) and a chromed iron hook, rounded at the edge to avoid any damage on the clothes hanged on it. This component is placed on the mould when it is injected, thus achieving a single piece.

They are supplied in 6- unit packs.

Bambú wall

Wall hangers are fixed by means of a screw placed on a wall dowel, concealed with an ABS cap, dark grey colour.

Packaging

Coat rack

Box base and coat racks Weight: 6,5kg Dimensions: 38x38x12cm

Box Structure Weight: 1,5kg Dimensions: 180x6cm
